

Diagnosis of the craniomandibular function and dysfunction using a condylography (edición en Ingles)

Autor: Sadao Sato

ESPECIALIDAD: Oclusión CONTIENE: Ebook CARACTERÍSTICAS:

ISBN:	9786287681507
Impresión:	Lujo gofrado
Тара:	Dura
Número de Páginas:	206
Año de publicación:	2024
Número de tomos:	0
Peso:	1.34 kg
Edición:	1

DESCRIPCIÓN

The book Diagnosis and Treatment of Malocclusion with Condylography, written by Dr. Sadao Sato, professor at Kanagawa Dental University, Japan, serves as a comprehensive and practical guide for dentists and orthodontists interested in diagnosing and treating temporomandibular disorders. This work addresses the growing demand for specialized care in temporomandibular occlusion, a field that has gained more relevance due to changes in dietary habits and dental health practices. Throughout twenty chapters and over 500 illustrations, Dr. Sato delves into the structure and function of the craniomandibular system, mandibular positioning, and the factors contributing to malocclusion. He also explores the risk factors associated with malocclusions and introduces condylography as a key tool for functional analysis. The book provides detailed descriptions of the condylography procedure, the use of analytical tools, and how to interpret results to determine temporomandibular symptoms and disorders. In addition to presenting the condylography technique, the author includes a series of case studies that illustrate the evaluation and treatment of various temporomandibular joint disorders. The work highlights the importance of lateral displacement of the mandibular condyle in the diagnosis and management of these conditions. Dentists and orthodontists will find this book to be an essential tool for accurately assessing temporomandibular pathologies and defining optimal therapeutic strategies for their patients, thereby enhancing the quality of life for those with malocclusion problems.

- Chapter 1. History of Occlusion and Mandibular Movement Research
- 1) The dawn of mandibular movement research
- 2) Gysi's Axis Theory
- 3) A new era of mandibular movement research
- 4) The age of Gnathology in California
- 5) The paradigm shifts in the field of gnathology
- 6) A new era of gnathology

Chapter 2. Structure and Function of the Cranio-mandibular System

- 1) Evolution of morphological changes in the human temporomandibular joint
- 2) Cranio-mandibular System (CMS)

Chapter 3. Concept of Mandibular Position - Clinically Required Mandibular Position

- 1) Definition of Centric Relation
- 2) Definition of Mandibular Position
- 3) In search of physiologic treatment, mandibular position
- 4) Misconceptions about the hinge axis and mandibular position
- 5) The necessity for a hinge axis
- 6) Bite Registration

Chapter 4. Factors of malocclusion and the temporomandibular joint

- 1) What is malocclusion?
- 2) Basics of occlusion
- 3) Malocclusion factors

4) Harmonization of the cranio-mandibular system (CMS) with the occlusal system

5) Malocclusion and oral diseases

Chapter 5. Malocclusion and Temporomandibular Joint Disorders (1) Risk Factors for Human Temporomandibular Joint

1) Loss of the mandibular position retention mechanism

2) Structural Changes in the TMJ

3) The inclination of the occlusal plane and relative condylar inclination (RCI)

4) Risk Factors of Human Temporomandibular Joint (TMJ)

Chapter 6. Malocclusion and Temporomandibular Joint Disorders (2) Risk Factors Derived from Occlusion

1) Cranio-mandibular system and risk factors of occlusal origin - closed dental arch

2) Setting occlusal support during growth

3) Load on the temporomandibular joint and temporomandibular disorders

4) Interference (premature contact, cusp interference, occlusal interference)

5) Bruxism and malocclusion

6) Examination of bruxism movement by condylography

7) Relationship between sagittal condyle inclination and occlusal guidance inclination

Section II Practice / 51

Chapter 7. Condylography as a functional analysis of the temporomandibular joint

1) Analysis of the posterior guiding elements of mandibular movement

2) Analysis of morphological changes and pathophysiology of the temporomandibular joint

3) Reference Position (RP) of the mandible

4) The concept of RP-ThP

5) Mandibular position as a therapeutic goal (Therapeutic Position, ThP)

R www.amolca.com

-----o INDICE

Chapter 8. Recording of mandibular condyle movement by condylography 1) Condylography procedure

Chapter 9. Hinge Axis and Standardization of Movement Recording
1) How to find the hinge motion axis of the mandible by trial-and-error method
2) Mandibular hinge motion axis by condylography
3) Standardization of movement records by condylography

4) Free movement and guided movement by the clinician

Section III Diagnosis / 69

Chapter 10. Essential Evaluation of Condylographic Tracing

1) Basics of mandibular condyle movement

2) Evaluation of the movement pattern

Chapter 11. Analysis of movement patterns - Tools for analysis

1) Cadiax® curves

2) Time curves - Time trends in movement patterns

3) Axis movement - Hinge axis movement pattern

4) Tooth kinetics - Observation of movement patterns at an arbitrary point

5) Translation/Rotation - Balance analysis of mandibular rotation and translation

Chapter 12. Analysis of mandibular functional movement patterns 1) Masticatory movement

R www.amolca.com

- 3) Swallowing movement
- 4) Bruxism movement
- 5) Mandibular Position Analysis (Condylar Position Measurement, CPM)

Chapter 13. Joint Loosening

- 1) Temporomandibular Joint (TMJ) Loosening
- 2) Initial Fisher's Angle as an early sign of Temporomandibular Joint Disorder
- 3) Changing character as an early sign of Temporomandibular Joint Disorder

Chapter 14. Progression of temporomandibular joint disorders and joint symptoms

- 1) Joint noise
- 2) The development and progression of temporomandibular joint disorders (Fig. 14.2)
- 3) Click classification: Classification by mandibular condylar movement
- 4) Limitation of mandibular movement
- 5) Factors that limit mandibular movement

Chapter 15. Importance of side shift of mandibular condyle

- 1) Lateral mandibular movements
- 2) Bennett movement
- 3) Abnormal Bennett movement
- 4) Lateral deviation of the mandibular condyle and ligamentous lock
- 5) Delta Y shift (?Y Shift)

Chapter 16. Diagnostic significance of working side mandibular condyle movement in asymmetric movement

- 1) Mandibular condyle movement on the working side of the asymmetric movement
- 2) Relationship between hinge axis and vertical rotation axis
- 3) Forward movement of the working side mandibular condyle in lateral mandibular movement

Section IV Case Studies / 133

Chapter 17. Case 1. Early treatment of severe growing retrognathic mandibula with dysfunction cranio-mandibular system

Chapter 18. Case 2. A case of acute closed-lock due to loss of occlusal support

Chapter 19. Case 3. Prevention of occlusal collapse and occlusal treatment based on bruxism

Chapter 20. Case 4. Step-by-step evaluation and occlusal treatment of a case with complex functional disorder

- Appendix. Explanation of terms related to condylography
- 1. Angle of Disclusion (AOD)
- 2. Anterior Positioning
- 3. Avoidance Movement
- 4. Axis Orbital Plane (AOP)
- 5. Bennett Angle (Transversal Condylar Inclination, TCI).
- 6. Bennett Movement
- 7. Class II Compensation
- 8. Condylar Position Measurement (CPM)
- 9. Compression of the mandibular condyle
- 10. Changing Character

- 11. Closed Arch
- 12. Closed Lock
- 13. Craniomandibular System (CMS)
- 14. Cusp Inclination (CI)
- 15. Delta Y shift (PY Shift)
- 16. Deranged Reference Position (DRP)
- 17. Distraction
- 18. Fischer Angle
- 19. Gnathological Occlusal Plane (GOP)
- 20. Hinge Axis
- 21. Hydrodynamic Position Mechanism
- 22. Hydrodynamic Protecting Mechanism
- 23. Interference
- 24. Immediate Side Shift (ISS)
- 25. Initial Fischer Angle.
- 26. Intercoronal Opening Angle (ICO)
- 27. Intercuspal Position (ICP)
- 28. Internal Derangement
- 29. Joint Loosening
- 30. Lateral Ligament
- 31. Laterotrusion
- 32. Mediotrusion
- 33. Negative Bennett Movement
- 34. Occlusal Support
- 35. Over-Rotation

- 37. Retroarticular Connective Tissue (Retroarticular Pad)
- 38. Reference Position (RP)
- 39. Relative Condylar Inclination (RCI)
- 40. Retral Stability
- 41. Retruded (Retral) Contact Position (RCP)
- 42. Retrusive Guidance
- 43. Rotational Click
- 44. Sagittal Condylar Inclination (SCI)
- 45. Self-Centering Mechanism
- 46. Synovial Joint
- 47. Therapeutic Position (ThP)
- 48. Translational Click
